STICK TO THE BASICS- THE SECRET TO PREDICTABLE ADHESIVE DENTISTRY

EDMOND R. HEWLETT, DDS

Ever wonder why the same material or technique works for some patients but not for others? If so, you're not alone. Today's adhesive technology enables dentists to provide restorative care with minimal invasiveness and stunning esthetics, but the complexity of the materials and the clinical variables that affect their performance is often underappreciated. This presentation will provide attendees with a path through the hype to arrive at sound, practical, evidence-based tips for maximizing restorative predictability. Learn how to select materials according to specific patient factors, how to place posterior composites more efficiently while eliminating post-op sensitivity, and more!

BASIC LIFE SUPPORT (BLS) FOR HEALTHCARE PROVIDERS (HCP)

Course is a video-based, Instructor-led course that teaches both single-rescuer and team basic life support. This course trains participants to promptly recognize several life-threatening emergencies, give high-quality chest compressions, deliver appropriate ventilations and provide early use of an AED.

BLS for Healthcare Providers teaches skills using the American Heart Association's proven Practice-While-Watching technique, which allows Instructors to observe students, provide feedback and guide students' acquisition of skills.

With their student manual for the course, students receive the new Pocket Reference Card, designed to provide quick emergency information to the rescuer at any time.

JUNE 15 8:30AM-4:30PM ROOM 136

ORAL SURGERY FOR THE GENERAL PRACTITIONER TONY POGREL, MD, DDS

Covering a range of medical conditions which manifest in the oral cavity.

Tooth Transplantation, Reimplantation and Surgical Uprighting. This is a somewhat lighthearted talk on our experiences with these three procedures over many years and general. **Nerve Damage in Dentistry.** This will include damage occurring from local anesthetic injections, root canal therapy, implant insertion, and dentoalveolar surgery including third molar surgery and periodontal surgery. It will cover etiology, prevention, evaluation, and treatment.

The Management of Intraoral Dysplasia. This includes a discussion of the significance of dysplasia in the oral cavity and the development of oral cancer. It also covers the optimum management of dysplasia and a discussion of some of the new technologies available that might help detect early changes of malignancy. **An Update on Medication-Related Osteonecrosis of the Jaws.** It covers new ideas in the management of this condition, particularly related to non-bisphosphonate medications, such as denosumab, which are now being used more frequently. **The Management of Medical Emergencies** covers some of the medical conditions where prompt treatment by a dentist can actually save a life. **Issues Regarding Wisdom Teeth.** This will include a talk on current philosophy regarding the need to extract wisdom teeth and the optimal age to extract. It will also cover some of the complications that can occur with third molar extraction and will discuss new ideas such as coronectomy.
